Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 10/27/2010 has been entered.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 and 7-8 are rejected under 35 U.S.C. 102(b) as being anticipated by Naruse et al (5,930,881).

1. Naruse et al teach a method of assembling a component in an assembly (20) *(see column 10 lines 18-30, where it discloses assembling/aligning a vehicle wheel)*, comprising:

positioning the component in the assembly (20) in accordance with a proposed positioning in the assembly (20) *(see Figure 5, where it shows a vehicle wheel positioned onto a vehicle)*;

sensing that the component is in its correct special position in the assembly by use of sensing means (76) capable of sensing spacing relationship (*see column 14 lines 41-54 and column 15 lines 35-48*);

communicating information regarding said position to an information processing means (*see column 14 lines 47-61*).

7. Naruse et al teach the method of claim 1, further comprising a step of displaying information communicated to the information processing means on information display means (*see column 14 lines 55-61, where it discloses displaying said information on a monitor*).

8. Naruse et al teach the method of claim 1, wherein the information processing means is a computer (*see column 14 lines 55-61*).

Response to Arguments

Applicant's arguments with respect to claims 1 and 7-8 have been considered but are moot in view of the new ground(s) of rejection.
